Description

tural beauty of the surroundings at Airen Collection demanded an architecture that would preserve and enhance it. From the color of its facade to the open layout towards the exterior and the presence of native vegetation, every element was chosen to maintain its essence.

Airen Collection homes are sustainable, featuring bioclimatic architecture and facilities designed to generate low energy consumption. Green roofs, photovoltaic panels, an electric car charging point, xeriscaping, rainwater collection tanks, and an aerothermal system for heating and hot water production are just some of the elements that make these homes unique.

Airen B is one of the housing concepts available. With a cozy interior where wood plays a special role, Airen B stands out for having the rest area clearly separated from the more active areas of the home, with three bedrooms on the upper floor and the kitchen and living-dining room on the ground floor. The exterior areas, including an outdoor dining porch, terrace, pool, and gardens with native species, play a major role, connecting the home with nature and allowing residents to enjoy the Mediterranean climate almost all year round.
