## Description

JUNCO houses is a project of new exclusive design single-family homes, aimed at offering an economically viable option within an increasingly inaccessible real estate market. The concept of the homes arises from the optimization of functionality, costs, and design, resulting in three sizes of JUNCO houses that cater to personal and spatial needs.

In addition, numerous finishing options, types of air conditioning, self-consumption with photovoltaic panels, or home automation control are proposed. Therefore, JUNCO houses provide the opportunity to configure a pre-designed product, adaptable to your needs, and with a predetermined price.
